

Synopsis

Project Title: - Online Sim Services Portal

Introduction :-

Online Sim Services Portal is an idea of developing a software which is used when a customer wants to purchase a new SIM card from Sim Company.

The idea of this project is to create a web-application which is written using advanced java concepts like JSP – Servlet. We are developing a web – application which is used to store the data of the new customer into the Sim Company’s database and customer can check out the new plans availability, existing plans of the customer and recharge their cards.

By using this system, we create party which has all the information about customer. This system is useful for all the process that involves in activation of the Sim-card prepaid & postpaid connection.

Technology and Tools/Softwares :-

1. Java - 8
2. Tomcat Server
3. HTML-5 & CSS-3

Teams :-

- 1.
- 2.

Features :-

- Customer Login
- Admin Login
- Recharge and payment facility
- New Plans Availability
- Bill Generation
